Business Analytics graduate (2026) working at the intersection of finance, data and operations. I build the models and dashboards that decisions rest on, and I stress-test them before trusting them: seven years of market history, 180+ assets, Monte Carlo simulation for downside and drawdown. I have also run a product end to end – pricing, users, unit economics – and closed it on a cost-benefit analysis rather than defending sunk cost. Looking for a full-time junior role.

PROJECTS

Multi-Asset Algorithmic Trading System | *Python (pandas, NumPy), Monte Carlo, REST APIs* 2026

- Built the full analytical stack behind 3 systematic strategies: sourcing, cleaning and validating 7 years of history across 180+ assets from financial APIs, with correctness checks at every stage of the pipeline
- Ran scenario analysis with Monte Carlo simulation (bootstrap and permutation) to quantify loss probability and expected drawdown, and tracked performance against pre-defined KPIs rather than after-the-fact narratives
- Designed a methodology to defeat my own bias – pre-registered hypotheses, cross-universe validation, single-look temporal holdout – which discarded 6 of my hypotheses on the evidence (one through a 69,000-observation study) and surfaced 7 methodology errors; documented in 12 reproducible reports

The Morning Club – AI financial-news platform (founder) | *NLP, n8n, React, Supabase* 2025 – 2026

- Founded and built solo a platform that processes financial news with AI models (key-fact extraction, summaries, sentiment scoring) plus the dashboards tracking product metrics
- Reached 250+ early-access users, some paying for premium, and a 3,000-person waitlist; negotiated directly with news sources on licensing terms
- Closed the project on a cost-benefit analysis: administrative, legal and sourcing costs exceeded revenue even at 100% premium conversion – the numbers, not the attachment, made the call

EXPERIENCE

Intern – Data & Media Strategy Apr. 2025 – Jun. 2025

Havas

Madrid, Spain

- Analysed and tracked digital campaign performance for global clients across several European markets, producing recurring reporting for business stakeholders in English
- Traced systematic data-type errors to an ambiguously worded collection question, presented the evidence to non-technical teams and got it rewritten – the fix landed upstream, not in the analysis
- Automated the ETL of a data review project, removing the manual cleaning the team repeated every quarter

EDUCATION & CERTIFICATIONS

Universidad Francisco de Vitoria Madrid, Spain

BSc in Business Analytics

2021 – Jul. 2026

- Quantitative degree covering statistics, data modelling and SQL; also completed the first year of the Business Analytics + Business Administration (ADE) double degree
- Final thesis (Jul. 2026, grade 7.4/10): data-driven analysis of real-estate supply, owned from research design to defence
- **Information Technology Specialist: Python** (Certiport/Pearson, 2026, 808/1000); **Power BI** (UFV, 2023); **Investing** (UFV, 2023); **SAS Programming 1 & 2** (SAS, 2021)

SKILLS & ACHIEVEMENTS

Analysis: financial modelling and backtesting, Monte Carlo simulation, scenario and variance analysis, KPI definition and tracking, market research

Tools: Excel, Python (pandas, NumPy), SQL, Power BI (certified), Tableau, SAS (certified); dashboards and reporting for non-technical stakeholders

Automation & AI: n8n, Make.com, REST APIs, NLP and sentiment pipelines, agentic coding with Claude Code used daily

Achievements: Top-8 in an international esports competition as team leader; founded and wound down a product with 250+ early-access users

Languages: Spanish (native), English (C1), French (intermediate)
